

SCAT INDIA TRADE SHOW 2024 POISED FOR GROWTH ON BROADBAND DELIVERY

Scat India Trade Show 2024 will showcase a range of innovation spread across Cable TV, IPTV, Broadband and IPTV Segments.

The SCAT India Trade Show 2024 will take place from October 17 to 19, 2024, at the Jio World Convention Centre in Mumbai, India. This trade show is a prime event with a historic legacy of three decades for the satellite, cable TV, DTH, and broadband industries, offering a platform for more than 300 exhibitors to showcase their latest products and services. These include satellite communication solutions, broadband cable, fiber optic components, IPTV, and more.

The event attracts key industry professionals such as broadcasters, Pay TV channels, ISPs, and equipment manufacturers, providing ample networking opportunities with potential customers, partners, and investors. India is now the second-largest consumer of internet data, highlighting the growing demand for broadband and fiber optics.

The future of the cable TV market in India is expected to be shaped by a mix of challenges and

opportunities driven by digitalization, competition from OTT platforms, and regulatory changes.

THE FUTURE OF CABLE TV IN INDIA

With the continued rollout of Digital Addressable Systems (DAS), India's cable TV market has already seen significant transitions from analog to digital. This shift enables better service quality, higher content variety, and improved revenue collection through subscriber-based pricing models. However, this also intensifies competition with Direct-to-Home (DTH) services and OTT

platforms like Netflix, Disney+ Hotstar, and Amazon Prime.

The rise of OTT platforms has drastically affected traditional cable TV subscriptions. As of 2023-24, over-the-top (OTT) services are growing rapidly, offering more on-demand and personalized content, which has led to a plateau in cable TV growth. The Indian OTT market is expected to

grow at a CAGR of around 21%, further putting pressure on traditional cable services to innovate.

The Cable operators are increasingly offering hybrid models that combine cable TV with broadband and OTT subscriptions to retain customers. Some providers are integrating IPTV services and smart set-top boxes, allowing viewers to switch between traditional TV and internet-based content seamlessly.

Despite competition, cable TV retains a strong presence in rural and Tier-2/Tier-3 markets where internet penetration and digital literacy are still catching up. In these regions, cable

FOCUS: SCAT 2024 SHOW GUIDE

TV remains a more reliable and affordable option compared to DTH or OTT services, offering localized content in regional languages.

The Telecom Regulatory Authority of India (TRAI) continues to revise regulations aimed at consumer protection and promoting transparency, particularly through tariff orders. These regulations, while providing a more consumer-friendly landscape, may lead to short-term challenges for cable operators by reducing their pricing flexibility.

Investment in fiber-optic networks and broadband services by cable operators is becoming more common. As India pushes toward becoming a more digitally connected country, cable operators may leverage their existing infrastructure to offer broadband and IPTV services, expanding their revenue streams.

India's cable TV market faces significant challenges from OTT services and changing consumer preferences, it remains resilient, particularly in non-metro regions.

SATELLITE TELEVISION AND ITS FURTHER GROWTH

The future of satellite TV in India's cable TV segment is likely to undergo significant transformations, driven by market dynamics, technological innovations, and changing consumer behavior. Satellite TV faces increasing competition from OTT (Over-the-Top) platforms like Netflix, Amazon Prime, and Disney+ Hotstar, which offer more personalized and on-demand content. This trend is particularly strong in urban areas, where broadband connectivity is expanding. As consumers shift towards these platforms, satellite TV operators may experience a slowdown in subscriber growth.

Satellite TV providers are increasingly focusing on regional content and customized packages to attract diverse audiences. India's vast linguistic diversity offers

will showcase a range of
innovation spread across
Cable TV, Broadband and
IPTV Segments.

Cable operators are likely to adapt through hybrid models, offering both traditional TV and digital services to remain competitive.

PARTNERS AT SCAT INDIA TRADESHOW 2024

FOCUS: SCAT 2024 SHOW GUIDE

opportunities for satellite TV providers to cater to niche markets by offering regional language content, which OTT services are also tapping into but have not yet fully saturated.

With advancements in broadcasting technologies, the demand for 4K and Ultra HD (UHD) content is expected to grow. Satellite TV is well-positioned to offer high-quality broadcasts in these formats, especially for live sports, movies, and other event-based content that requires high bandwidth, where OTT platforms still face limitations due to network congestion.

The future will likely see hybrid broadcasting models where satellite TV operators integrate broadband connectivity and offer OTT services via a single platform. This allows viewers to access both satellite channels and on-demand content through one device, improving convenience and retaining customers who might otherwise switch to OTT-only services.

SATELLITE BROADBAND "OFFERS IMMENSE" POTENTIAL

Satellite broadband has significant potential to transform cable TV services in India, particularly with the rise of direct-to-home (DTH) platforms and the need for enhanced internet connectivity in rural and remote areas. Let's break down the growth factors and future outlook. • As India moves toward digital-first platforms, traditional cable TV operators are feeling the pressure to innovate. Satellite broadband enables cable TV companies to offer not just television services but also high-speed internet, increasing their value proposition.

The Indian government has promoted satellite communications,

The banner features the A.B.I.S. 30 YEARS logo (Asia's Broadcasting & Infotainment Show) and the SCAT 2024 SCAT INDIA logo. It includes the event dates (17-19 October, 2024) and location (Jio World Convention Centre, Mumbai). A prominent headline reads "Avail the FREE Shuttle Bus Service". Below this, a white bus is shown with the event logo on its side. To the right, a grey box lists pickup/drop locations: "Next to BEST / Cityflo Bus Stop, Western Express Highway Side, Near Oberoi Mall" and "Bandra Station East Bus Depot". A QR code is provided with the text "SCAN TO FIND OUT THE SCHEDULE". The website www.scatindiashow.com is also mentioned.

especially through the Digital India initiative. There is also a focus on rural connectivity, with projects like BharatNet pushing for satellite-based solutions in underserved areas. This opens a new market for both satellite and cable TV providers, especially where fiber infrastructure is lacking.

New satellites like those from OneWeb, backed by Bharti Airtel, and Starlink by SpaceX are set to offer low-latency, high-speed broadband across India. These technologies provide an opportunity for cable TV operators to bundle satellite broadband services, enhancing revenue streams.

Companies like Reliance Jio, which is investing heavily in satellite

broadband, and international players like Amazon's Project Kuiper, will intensify competition. This will push cable TV companies to innovate their business models, perhaps leading to more affordable, flexible bundled plans for consumers.

Satellite broadband presents an exciting opportunity for the future of cable TV in India, particularly in expanding services to underserved areas. With ongoing technological advancements, strategic partnerships, and government support, this sector is poised for significant growth over the next decade. However, managing costs and navigating regulatory hurdles will be key to realizing its full potential.

D01: PLAYBOX TV (NEXT TRILLION TECHNOLOGIES)

PlayboxTV is a platform where content creators and content lovers come together on a single platform. PlayboxTV aims to revolutionize the way people consume content in India. We are a super OTT aggregator providing OTT subscription along with premium live TV channels, Radio channels, Live Sports and Podcasts. We are the 4th largest OTT aggregator in the market. We have 25+ OTTs like Disney+ Hotstar, Sony Liv, Discovery+ etc. Our 350+ live TV channels range from News and Entertainment to Devotional and Educational, serving our audience across the whole spectrum.

We provide our services mainly through ISP's and have revived the cable community by collaborating with over 50,000 cable TV operators, empowering them to offer digital products and services. We allow users to stream premium content seamlessly on any device, whether it's a mobile phone, ordinary TV, or smart TV.

Our Vision:

'PlayboxTV is built to be the ultimate entertainment gateway of every home with amazing content using the power of technology.'

Our Mission:

'The mission of PlayboxTV is to bring content lovers and content creators on the same platform by aggregating several OTT into a single app so that it becomes easier and less time-consuming to discover and search for quality content.'

URL: www.playboxtv.in

D02: OTT PLAY (HINDUSTAN MEDIA VENTURES LTD.)

OTTplay is India's leading OTT aggregator that brings together 40+ streaming platforms into a single, easy-to-use interface. By offering a seamless content discovery and viewing experience, OTTplay allows users to explore 50,000+ titles from across platforms such as Sony LIV, ZEE5, and many more. From movies and TV shows to documentaries and web series, OTTplay hosts content from both regional and international markets, ensuring a personalized and

diverse entertainment experience for viewers. With just one subscription, users gain access to a wide range of OTT platforms, saving time and effort in managing multiple apps across formats. At the core of OTTplay is its cutting-edge technology, which integrates AI-driven content recommendations to ensure that users always find something they love to watch. The platform leverages advanced algorithms to learn user preferences and deliver highly personalized suggestions across genres and languages, simplifying the content discovery process. Additionally, with single sign-on and support across multiple devices, from smart TVs to smartphones, OTTplay ensures that users can enjoy uninterrupted streaming anywhere, anytime. With further plans to scale up across India by partnering with tech-first stakeholders like ISPs, OTTplay aims to become a multi-category platform for consumers across age groups to experience holistic entertainment.

Quote for Avinash Mudaliar, Founder and CEO: "OTTplay has been redefining the way users discover and consume content in India. By bringing together the vast universe of OTT platforms into one space, we are thrilled to be offering a unique, personalized, and hassle-free entertainment experience. Our goal is to make content accessible and enjoyable, while also creating value for both users and content creators. We strive to constantly improve the experience for our users and leverage the technological advancements to further deliver a greater experience across viewing formats."

D04: SYNNEFO IMS

Synnefo | The Brand

Formed in 2010, Synnefo stands dedicated to developing software for ISP Solutions. Ever since its inception, we have helped small, medium, and large Internet Service Providers across the globe with comprehensive software solutions and ever-going research that beats the traditional approach.

"The latest update to Synnefo IMS software introduces a range of powerful features designed to enhance network management and streamline operations.

The new *Mikrotik dashboard* offers real-time insights and control over Mikrotik devices, providing an intuitive interface for monitoring and configuration.

OLT management is now more efficient, enabling seamless control of Optical Line Terminals with enhanced reporting capabilities.

The addition of *ACS (TR069)* support simplifies device management, allowing for remote provisioning and monitoring of customer premises equipment.

The *Inventory* feature has been revamped to offer better tracking and management of network assets, ensuring that resources are utilized optimally.

Finally, the *OTT Billing* feature introduces a comprehensive billing solution for Over-The-Top services, making it easier to manage and bill customers for various media services, all within the Synnefo IMS platform."
